**Subject:** RE: Background Data

For the summary table, can you list min, max, mean, and any UTL values that were calculated, recognizing some datasets were too small to calculate a UTL, for which you can indicate NA with a footnote indicating dataset size limitation.

If possible, can you construct summary table to include, and stratify by, results you gave us a couple of days ago for upper portions of the sampling effort versus the data you analyzed yesterday for the areas around Durango? Point being we will be looking at different background levels for those two different areas.

I'm in the office – feel free to call with any questions,

Then we will decide which background values are most appropriate to use for the screen, and relay that info to Megan.

Thank you!

See the attached Excel files. There is one file for dissolved metals, one for total metals, one for sediments. Within each workbook, there is a tab for each location plus a tab with all of the data. Please review before I send to others.

Wendy, what stats do you want in the background summary table?
